Subject: Exciting News: S42 and 42 Collaboration

Dear students,

We're excited to announce a new chapter for S42! Its close bond with 42 is now solidified through a collaboration that secures its future and strengthens its community role.

What This Collaboration Means for You

- **Confidentiality**: Data is now managed by 42, guaranteeing the highest security standards.
- **Longevity**: Hosting costs are covered by 42, ensuring the project's sustainability.
- **Contribution**: You can contribute confidently, knowing the project is in secure hands.

As part of this collaboration, we've migrated all data to a Kubernetes cluster managed by 42, and hosting has transitioned from OVH to 42's management.

What Stays the Same
S42 remains independent and open-source. While 42 oversees hosting and data governance, I (@42atomys) continue to manage the project and its evolution.

This collaboration celebrates our shared achievements and sets the stage for future growth. Thank you for your support and enthusiasm for S42—we're excited to keep evolving it for everyone's benefit!

Best regards,
